

React: Hooks

React – countries of the world

The following exercise contains the following subjects:

- ◆ useState
- ◆ useEffect
- ◆ Controlled components

Instructions

Lets call this API end point when the component mounts to the screen

<https://restcountries.eu/rest/v2/all>

to get the list of countries of the world.

Display all the countries in a simple list.

A user is able to filter the countries from an input.

Simple demo [here](#)

Think of what kind of state you need and what kind of components you need to accomplish this.
