React: Life Cycle Methods

React – Spinner

The following exercise contains the following subjects:

◆ Life Cycle Methods and Spinners

Instructions

1. Create a Spinner Component. (use one of the spinners we created in the CSS course)

2. In the App Component, create a timer (with setTimer) when the component mounts to the screen.

3. When the timer is still active display a spinner to the screen.

4. When the timer is finished remove the spinner from the screen.

Extra:

Create 3 different spinners and randomly select one of them when the program starts.
